

Attracting Romance with Feng Shui

By Michelle Hess

You can set the stage for a romantic evening with candlelight, flowers and soft music. A few improvements to your décor and you have created a romantic ambience to share with someone special. But if your current relationship is lackluster, or you are single and looking for love, you may want to take a closer look at how your living space can spice up your love life.

The master bedroom is the best place to begin your romantic redo. Make sure it feels fresh, clutter free, and rejuvenating. Invite the energy of partnership by decorating in multiples of two, with pillows, chairs, candles, plants, etc. The feng shui colors for partnership are shades of red, pink or burgundy. However, peach is the ideal color to invite a new love. Use these colors on the walls, in your bedding, or as accents. To create more harmony, incorporate the circular or oval shape in your décor.

How do you envision your ideal partnership? Display artwork that depicts the kind of relationship you desire, and replace pictures that portray loneliness, sadness or other negative aspects. Remove items from your bedroom that can interfere with intimacy, such as exercise equipment and computers that remind you of work, or photos of anyone besides yourself and your partner. If you can't remove them, then cover them at night, including the TV!

There is a direct connection in feng shui between Partnership and Self Knowledge. As writer Jane O'Reilly noted, "The first step is to like yourself enough to pick someone who likes you, too." Knowing who you are and feeling good about yourself is vital to attracting, and being happy with, someone who will appreciate what you have to offer to the relationship. Add a little ambience and a few feng shui enhancements, and bring more passion into your life.
